

Joel Fonseca

Software Engineer · DevOps & Systems Architect

Building DoutorVida's core insurance & credit platform

fonsecaajael@gmail.com · +351 937 754 496 · Portugal · github.com/fonsecajoel · LinkedIn

6 apps · 8 packages

48+ backend modules

2,000+ commits

14+ containerized services

TECHNICAL SKILLS

Frontend

React, React Router, Next.js, TypeScript, JavaScript, TailwindCSS, React Native, Expo

Backend & Data

NestJS, Node.js, Prisma, PostgreSQL, Redis, ASP.NET, .NET, Java, REST APIs

Platform

Turborepo, pnpm workspaces, DDD, Shared Packages, E2E Testing

DevOps & Cloud

Docker, CI/CD (GitHub Actions), AWS, Azure, Grafana, Git, VMware, JIRA

Practices

RBAC, JWT Auth, System Design, Observability, Agile

LANGUAGES

Portuguese Native

English Professional

EDUCATION

Bachelor's in Computer Engineering

ISCTE – Instituto Universitário de Lisboa · Lisbon

IT Systems Management & Programming

Escola Secundária do Monte de Caparica

CERTIFICATIONS

CS50 Cybersecurity

Harvard University · Jul 2025

CS50 AI with Python

Harvard University · May 2024

CS50 Computer Science

Harvard University · Jan 2023

Web Developer Bootcamp

2024

RPA with UiPath & SQL Server

Udemy · Jan 2024

Software Engineer and Systems Architect currently leading development on **DoutorVida's core digital platform** — an enterprise monorepo with **6 applications, 8 shared packages, and 48+ backend modules** powering insurance and credit operations in Portugal. Primary engineering contributor (**2,000+ commits**) on a production codebase used daily by commercial and operations teams. 4+ years spanning regulated fintech, public sector, and product-led SaaS — from domain modeling and API design to CI/CD, observability, and secure deployment.

EXPERIENCE

Software Engineer · DevOps & Systems Architect

Apr 2026 — Present

DoutorVida Seguros e Créditos

Leiria, Portugal · On-site

Core platform — Enterprise monorepo (Turborepo + pnpm): 6 apps · 8 packages · 48+ backend modules · 14+ containerized services

- **Architecture & delivery:** Multi-app TypeScript monorepo (NestJS API + worker + event processes, React backoffice, shared domain/API packages) across 48+ domain modules.
- **Backoffice & CRM:** Client lifecycle management, lead pipelines, document workflows, and embedded CRM for commercial and operations teams.
- **Document intelligence:** OCR pipeline — auto-extracts client data, merges multi-file scans into verified PDFs, cuts manual onboarding in regulated context.
- **Integrations & automation:** External CRM and form systems via APIs, webhooks, and data-mapping engines synchronizing business entities.
- **DevOps & reliability:** Docker pipelines (dev → staging → production), GitHub Actions CI/CD, Grafana observability across 14+ services.
- **Security & compliance:** RBAC across 48+ API modules, JWT-authenticated boundaries, audit-friendly history tracking.

Software Developer (Freelance)

May 2022 — Present

Self-employed · Remote · Portugal

- Custom web applications and management systems for SMEs across healthcare, events, and professional services.
- Full product lifecycle: requirements, system design, development, testing, and client handover.
- Stack: React, Next.js, Node.js, TypeScript, PostgreSQL, ASP.NET, cloud-hosted deployments.

Junior Programmer

May 2024 — Nov 2024

Autoridade Tributária e Aduaneira (Portuguese Tax Authority)

Lisbon · Full-time · On-site

- Internal systems and web platforms supporting fiscal and administrative operations at national scale.
- Backend services and database integrations within a regulated, high-compliance environment.
- Git-based workflows and DevOps practices within a large public-sector engineering team.

Software Developer

Aug 2023 — Jan 2024

InforTucano · Oeiras, Portugal

- Enterprise web platforms and internal tools for business operations.
- Backend logic, database layers, and frontend integration in an agile delivery environment.

Computer Technician

Mar 2022 — Jun 2023

Fractalia · Madrid, Spain (Remote)

- Incident resolution across microcomputing, networking, and system management for enterprise clients.
- SLA-driven ticketing workflows — foundation later applied to DevOps and systems architecture.

OPEN TO OPPORTUNITIES

Full-time · Hybrid · On-site
Portugal

CORE STRENGTHS

- Enterprise monorepo architecture & domain modeling
- CRM, backoffice & document automation
- Production DevOps, CI/CD & observability
- Regulated fintech & public-sector systems

INTERNSHIPS

Application Software Programmer

Instituto Piaget · Feb — Jun 2020

Junior Web Programmer

Instituto Piaget · Jan — Apr 2019

SELECTED PROJECTS

CURRENT · PROFESSIONAL

DoutorVida Platform — Insurance & Credit Operations

NestJS · React · TypeScript · PostgreSQL · Prisma · Redis · Docker · Turborepo · Grafana

Flagship fintech platform: **6 apps, 8 packages, 48+ modules** covering insurance catalogs, client CRM, OCR document processing, and operational backoffice. Primary contributor with **2,000+ commits** — end-to-end from shared domain packages and REST APIs to React internal apps, with automated deployments and observability baked into the pipeline.

PERSONAL

Bora — Social Events & Nightlife

Expo · React Native · TypeScript · Supabase · PostgreSQL · TanStack Query · EAS

Founder-built social platform for discovering concerts, bars, and festivals in Portugal. Real-time event discovery, friend maps, chat, and media sharing with Supabase auth, Row Level Security, and cloud-ready mobile builds.

EnfEstágios — Nursing Internship Management

React · Node.js · PostgreSQL

End-to-end platform centralizing nursing internship management across Portugal — replacing fragmented manual processes with a unified digital workflow.

Healthcare Clinic Management System

Full-stack Web · Scheduling · Patient Records

Complete clinic management for an alternative medicine practice: appointment booking, therapist scheduling, patient records, and operational dashboards.

Field Service Operations Prototype

Backend API · Workflow Automation

Validated prototype for technical service companies — transforms WhatsApp-based job requests into structured, trackable work orders with a functioning backend API.
